
Water saving tips

**Only use water
for the essentials**

**Don't
waste it**

**Reuse it where
you can**

If you use a vehicle for business purposes, think:

- Do you need to wash them?
- If you do, use a bucket to rinse instead of a hose.
- If you can, take your vehicle to a local car wash where the water is often recycled.

Around the workplace:

- While waiting for the tap to run hot, catch any unused water and use it to water your plants.
- When washing your hands, turn off the tap while lathering up.
- Check for leaks on toilets, taps and urinals – even a small constant dribble can waste 200-400 litres every day.
